

Esteco North America Partners With Lyme Computer Systems to Offer Best-in-Class Design Optimization Software, modeFRONTIER®, for US Government Sales

modeFRONTIER v4.2 now available on Lyme Computer Systems' General Services Administration Schedule

Miami, FL – March 22, 2010: Esteco, the leading provider of Process Integration, Design of Experiment and multi-disciplinary, multi-objective, Design Optimization software, today announced a GSA partnership agreement with Lyme Computer Systems (LCS), a full-service computer products reseller, for the sale of **modeFRONTIER** to the Federal Government and Defense contractors.

modeFRONTIER is a multi-objective optimization and design environment which combines a comprehensive process integration platform with sophisticated, state-of-the-art, optimization, DOE and response surface algorithms, and powerful data and statistical analysis capabilities. It couples with virtually every CAE modeling/simulation tool and greatly reduces simulation effort while improving product performance.

“ESTECO has consistently experienced exceptional growth since the company’s formation, and achieved double digit gains even in 2009, in spite of a very challenging economic environment. We see this as clear evidence that **modeFRONTIER** is seen as a tangible value generator rather than an ‘expense’. Now, with our GSA channel established, our Government and Defense Contractor customers will find it much easier and faster to procure this valuable technology.” said Nader Fateh, Esteco North America’s Vice President of Business Development for the Americas.

About ESTECO

In the mid nineties a group of researchers at the University of Trieste in Italy were instrumental in setting up FRONTIER, a project jointly sponsored by the European Union and by European industrial participants (primarily from the aerospace industry). The goal of this project was to create a tool which combined a process integration platform with multi-objective optimization algorithms, with an easy-to-use GUI. At the end of the 5 year project the Trieste team formed the company ESTECO, and were awarded the IP rights to the software; at this point FRONTIER (subsequently named **modeFRONTIER**) became a commercial tool, and set a new standard among PIDO (Process Integration and Design Optimization) software.

About Lyme Computer Systems

Lyme Computer Systems established in 1983, is recognized as a premier IT solutions provider in the government and commercial markets by providing an unsurpassed mix of customer service and high quality products at the most competitive prices. Lyme Computer Systems has earned many manufacturers certifications including: Cisco Premier Partner, Dell GSA Reseller, Hewlett Packard Preferred Partner, IBM System X, VMware Enterprise plus many others. Our GSA Schedules feature more than 80 top manufacturers and suppliers. Their account managers and technical support staff, who are manufacturer trained and certified, are available to perform onsite installation and training, as well as hotline support. For more information, please visit www.lyme.com.
